

Welcome to Florida ProShield. Protecting your family's sanctuary.

Your home should be the safest place on earth for your children.

Our comprehensive Air Quality Inspection reveals the invisible factors impacting your family's daily health and comfort.

Stale air equals tired kids and lack of focus.

- High Carbon Dioxide (CO2) silently drains energy and cognitive focus.

- We inspect your home's ventilation to ensure your family is breathing fresh, revitalizing air.

Everyday household items releasing invisible gases that cause headaches.

Volatile Organic Compounds (VOCs) are hidden chemicals off-gassing from daily products.

Our Inspection detects these invisible gases to eliminate the source of unexplained headaches and throat irritation.

The perfect balance needed to stop airborne irritants from growing.

- Too much moisture turns your home into a breeding ground for microscopic contaminants.
- We help you find the precise temperature and humidity balance to keep your air pure.

ProLab: Scientific certainty for identifying microscopic allergens.

We partner with ProLab to analyze the unique particulate makeup of your home's air.

This advanced laboratory analysis gives us the absolute scientific certainty needed to target and eliminate hidden airborne irritants.

Continuous Monitoring captures your family's true living environment.

Air quality fluctuates constantly based on cooking, cleaning, and sleeping habits.

Instead of a basic spot-check, our continuous sensors track your air for days to capture the true, real-world conditions your family experiences.

Schedule your family's peace of mind today.

Take the guesswork out of
your home's air quality.

Contact Florida ProShield today to
schedule your family's complete
Air Quality Inspection.
